SystemRoMedic™ is a complete solution for easy transfers. The concept encompasses four product areas that meet most needs in different transfer situations.

Transfer, between two locations. **Positioning**, within the same location.

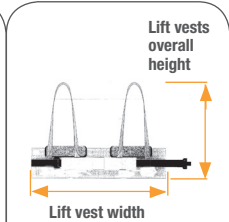

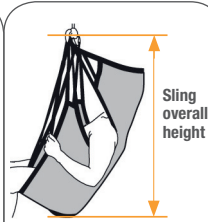

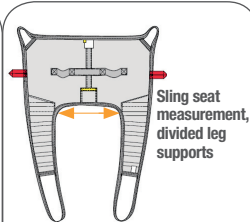

Support, for mobility. **Lifting**, both manual and mechanical.

PLEASE NOTE!

To determine the most appropriate model, size and material for the individual user, trial fitting of lifting slings is always essential. The size guide's measurements and recommendations are only intended as an aid to selecting lifting slings. The lifting sling's seat width gives an indication of how wide the user's hips (trochanter width) can be. The user's trochanter width must be within +/- 10 cm/3.9" of the lifting sling's seat width. The lift vest's width gives an indication of the girth of the user's trunk. The user's trunk girth must be within +/- 10 cm/3.9" of the lift vest's width.

The lifting sling is too large if the user's seat slides out too far at the lower opening, or if the leg supports slide forward towards the hollows of the user's knees.
The lifting sling is too small if the user's face is too close to the slingbar, if the leg supports chafe at the groin, or if the sling appears to be too tight or feels too tight.

Undivided leg supports/High and shoulder-high back

OBS!

En utprovning måste alltid göras för att fastställa vilken modell, storlek och material som är lämpligast för en enskild brukare. Storleksguidens mått och rekommendationer är endast ett stöd för att underlätta valet. Lyftselens stussmått ger en indikation om hur bred brukaren kan vara från höft till höft (trochantermått). Brukarens trochantermått ska vara inom +/- 10 cm från lyftselens stussmått. Lyftvästens bredd ger en indikation om vilken omkrets brukarens bål kan ha. Brukarens bål ska ha en omkrets inom +/- 10 cm från lyftvästens bredd. Lyftselen är för stor om brukarens stuss glider ut för mycket i den nedre öppningen eller om benstöden glider fram mot brukarens knäveck. Lyftselen är för liten om brukarens ansikte är för nära lyftbygel, om benstöden skär in i grenen eller om lyftselen ser trång ut eller upplevs trång.

MERK!

For å finne passende modell, størrelse og materiale for den enkelte brukeren er det alltid viktig å prøve løfteselen på forhånd. Målene og anbefalingene i størrelsesguiden er bare ment som en hjelp til å velge rett løftesele. Bredden på løfteselens sete gir en indikasjon på hvor brede brukers hofter (trochanter-bredde) kan være. Brukers trochanter-bredde må være innenfor +/- 10 cm av bredden på løfteselens sete. Løfteselens bredde gir en indikasjon på omfanget av brukers overkropp. Omfanget av brukers overkropp må være innenfor +/- 10 cm av løfteselens bredde. Løfteselen er for stor hvis brukers bak glir for langt ut av den nedre åpningen, eller hvis benstøttene glir fremover mot brukers knehaser. Løfteselen er for liten hvis brukers ansikt er for nær løfteboyle, hvis benstøttene gnager mot lysken eller hvis selen virker eller føles for stram.

Udelte benstøtter / Høy og skulderhøy rygg

BEMÆRK!

Der skal altid foretages en afprøvning for at fastslå, hvilken model og størrelse samt hvilket materiale, som er mest velegnet til den enkelte bruger. Mål og anbefalinger i størrelsesguiden er kun ment som en guide til at lette valget. Løftesejsets sædemål giver en indikation om, hvor bred brugeren kan være fra hofte til hofte (trochantermål). Brugers trochantermål skal ligge indenfor +/- 10 cm fra løftesejsets sædemål. Løftesejsets bredde giver en indikation om, hvilken omkreds brugers overkrop kan have. Brugers overkrop skal have en omkreds inden for +/- 10 cm fra løftesejsets bredde. Løftesejlet er for stort, hvis brugers bagdel glider for meget ud i den nedre åbning, eller hvis benstøtterne glider frem mod brugers knæhæser. Løftesejlet er for lille, hvis brugers ansigt er for tæt på løfteåget, hvis benstøtterne graver i lysken eller hvis løftesejlet ser ud til at være for lille eller føles for lille.

Udelte benstøtter / Høj og skulderhøj ryg

HUOMI

Yksittäiselle käyttäjälle parhaiten sopivan mallin, koon ja materiaalin määrittämiseksi nostolinjoja on aina sovitettava. Koko-oppaan mitat ja suositukset on tarkoitettu vain helpottamaan nostolinjojen valintaa. Nostolinjan istuinleveys antaa viitteitä siitä, kuinka leveä lantio (isojen sarvennoisten väli) käyttäjällä voi olla. Käyttäjän lantion leveyden on oltava +/- 10 cm nostolinjan istuinleveys. Nostolinjan leveys antaa viitteitä siitä, kuinka suuri käyttäjän vartalon ympärysmitta voi olla. Käyttäjän vartalon ympärysmittaan on oltava +/- 10 cm nostolinjan leveys.

Nostolinna on liian suuri, jos käyttäjän takamus luistaa liian pitkälle alemmasta aukosta tai jos reisu- ja hartoiden korkeinen selkäosa liustavat käyttäjän polvitäpätä kohti.

Nostolinna on liian pieni, jos käyttäjän kasvat ovat liian lähellä nostokaarta, jos reisu- ja hartoiden korkeinen selkäosa koskevat toisiinsa nivusten kohdalla tai jos nostolinna näyttää tai tuntuu käyttäjältä liian ahtaalta.

Yhtenäinen reisituki/Korkea ja hartioiden korkuinen selkäosa

Hinweis!

Die Anprobe ist bei jedem Pflegebedürftigen unabdingbar. Nur so kann das am besten geeignete Modell, die richtige Größe und das passende Material gefunden werden. Die Maße und Emp-fehlungen des Leitfadens für Hebeurrtgrößen dienen nur als Wegweiser bei der Wahl des richtigen Hebeurrs. Die Gesäßbreite des Hebeurrs dient als Hinweis dafür, welches Trochantermaß (das Maß von Hüfte zu Hüfte) der Pflegebedürftige haben kann. Das Trochantermaß des Pflegebedürftigen sollte innerhalb von plus/minus 10 cm der Gesäßbreite des Hebeurrs liegen.

Die Westenbreite dient als Hinweis dafür, welchen Umfang der Rumpf des Pflegebedürftigen haben kann. Der Unterbrustumfang des Pflegebedürftigen sollte innerhalb von plus/minus 10 cm der Westenbreite liegen. Der Hebeurrt ist zu groß, wenn das Gesäß des Pflegebedürftigen zu weit aus dem Ausschnitt im Gesäßbereich herausrutscht oder die Beinstützen in Richtung Kniekehlen des Pflegebedürftigen verrutschen. Der Hebeurrt ist zu klein, wenn das Gesicht des Pflegebedürftigen zu nah am Hebebügel ist, die Beinstützen im Schritt drücken oder der Hebeurrt zu eng aussieht oder als zu eng empfunden wird.

Ungeteilte Beinstütze / Hoher und schulterhoher Rücken

LET OP!

Om de juiste maat en geschikt model en materiaal voor de zorgvrager in kwestie te bepalen, is het nodig om vooraf goed de maten op te nemen en de tilbanden te passen. De maattabel en zijn afmetingen en aanbevelingen is slechts bedoeld ter ondersteuning en de keuze van de verwijzer gemakkelijker te maken.
De afmetingen van de tilband in cm vormen een indicatie van de maximale heupbreedte van de zorgvrager. De heupbreedte van de zorgvrager mag 10 cm breder of smaller zijn dan de afmetingen van de tilband in cm. De breedte van het tilvest geeft een indicatie van de omtrek van de romp van de zorgvrager. De omtrek van de romp van de zorgvrager zou binnen circa 10 cm van de lifest-breedte moeten zijn. De tilband is te breed als de billen van de zorgvragers teveel door de laagste opening glijden of als de beensteunen naar voren glijden naar de achterkant van de knieën. De tilband is te smal als het gezicht van de zorgvrager te dicht op het tiljuk zit, als de beensteunen in het kruis snijden of als de tilbanden te strak voelen of er te strak uitzien.

REMARQUE :

Pour déterminer le modèle, la taille et la matière de sangle les plus appropriés pour l'utilisateur, il est essentiel de tester l'installation des sangles de levage. Les mesures et recommandations de ce tableau sont fournies à titre indicatif pour vous assister dans votre choix. La largeur de l'assise de la sangle est régie par la largeur des hanches (du trochanter) de l'utilisateur, qui doit être égale à +/- 10 cm par rapport à la largeur de la veste. La sangle de levage est trop grande si l'assise de l'utilisateur a tendance à trop glisser par l'ouverture inférieure ou si les supports pour jambes s'inclinent vers le creux des genoux de l'utilisateur. Elle est trop petite si le visage de l'utilisateur est trop proche du fléau, si les supports pour jambes provoquent une irritation au niveau de l'aine ou si elle paraît trop serrée ou que l'utilisateur se sent trop serré.

Supports pour jambes joints/Dos haut ou à hauteur des épaules

NOTA!

Per determinare il modello, la taglia e il materiale più appropriati per ogni utente, è importante provare sempre le imbracature. Le misure e le raccomandazioni contenute nella guida alle taglie rappresentano esclusivamente un ausilio per la scelta delle imbracature. La larghezza di seduta dell'imbracatura fornisce un'indicazione di quanto possono essere larghe le anche dell'utente (larghezza del trocantere). La larghezza del trocantere dell'utente può essere di +/- 10 cm/3,9" rispetto a quella di seduta dell'imbracatura. La larghezza dell'imbracatura di sollevamento fornisce un'indicazione della circonferenza toracica dell'utente. La circonferenza toracica dell'utente può essere di +/- 10 cm/3,9" rispetto a quella dell'imbracatura di sollevamento. L'imbracatura è troppo larga se il sedere dell'utente scivola troppo all'infuori dall'apertura inferiore, oppure se i supporti per le gambe scivolano in avanti verso gli incavi delle ginocchia dell'utente. L'imbracatura è troppo piccola se il volto dell'utente è troppo vicino al bilanciamento, se i supporti per le gambe sfregano contro l'inguine oppure se l'imbracatura è o viene percepita come troppo stretta.

¡ATENCIÓN!

Se debe realizar una prueba para determinar qué modelo, tamaño y material son los más adecuados para un paciente en particular. Las medidas y las recomendaciones de la guía de tallas son sólo una ayuda para facilitar la elección. Las medidas de las nalgas del arnés indican de qué anchura puede disponer el usuario de cadera a cadera (dimensiones del trocánter). Las medidas del trocánter del usuario deben estar dentro de los +/- 10 cm de las medidas de las nalgas del arnés. El ancho del chaleco de elevación indica qué diámetro puede tener el tronco del usuario. El tronco del usuario debe tener un diámetro dentro de los +/- 10 cm de la anchura del chaleco de elevación. El arnés es demasiado grande si las nalgas del usuario se deslizan demasiado por fuera en la abertura inferior o si la sujeción de piernas resbala contra las rodillas del usuario. El arnés es demasiado pequeño si la cara del usuario está demasiado cerca de la percha, si la sujeción de piernas corta en la ingle o si el arnés parece apretado o resulta agobiante.

Soportes de piernas no divididos / Respaldo alto y respaldo de hombros altos
